The Solaire

The Solaire is the first LEED Certified Residential building in New York City, an astounding feat in itself; a conscious effort to sustain the environment was an obvious decision when considering it's impressive features. The roof consists of water capturing gardens and grasses stunting CO₂ emissions, a massive array of solar panels runs along the south and west siding, all appliances are energy star rated; along with numerous other Earth friendly features, it is no mystery why the Solaire is LEED certified.

Village Green

With LEED certified features like individual in-house thermostat and recycling facilities, a lobby heated by geo-thermal energy, and a naturally insulated green roof, the Village Green is a brave example for buildings across the country to turn to the green side. With wall to ceiling windows providing natural light, the apartments are designed to afford harmony. Explore their website to find rental space:
